

# Watson Machine Learning Overview

This lab will introduce the Watson Machine Learning capability using the Titanic dataset. The lab will consist of the following steps:

1. Adding a data asset to the DSXL project
2. Creating a Model to predict whether a person would survive
3. Testing the Model

## Step 1: Adding a Data Asset to the project

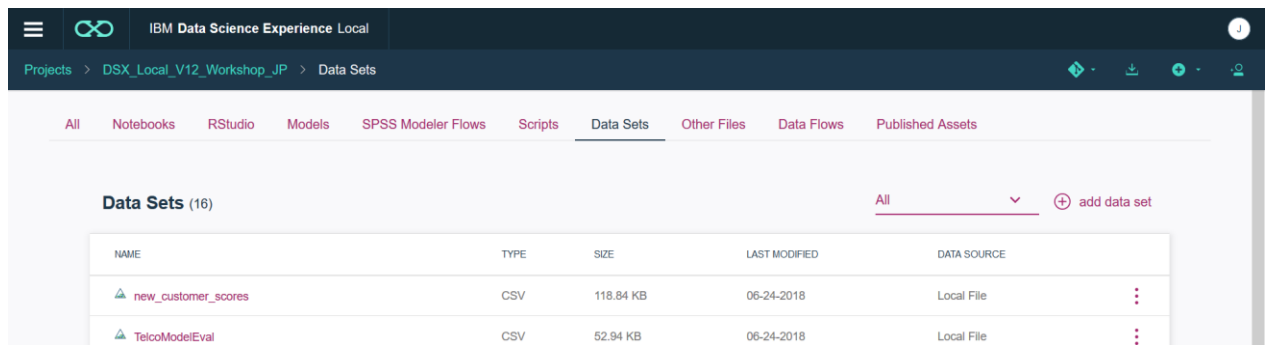

1. Download the Titanic data file from the following location by clicking on the link [Cleansed Titanic Data Set](#) and following the instructions below.
2. Right-click on **Raw** and select **Save link as...**

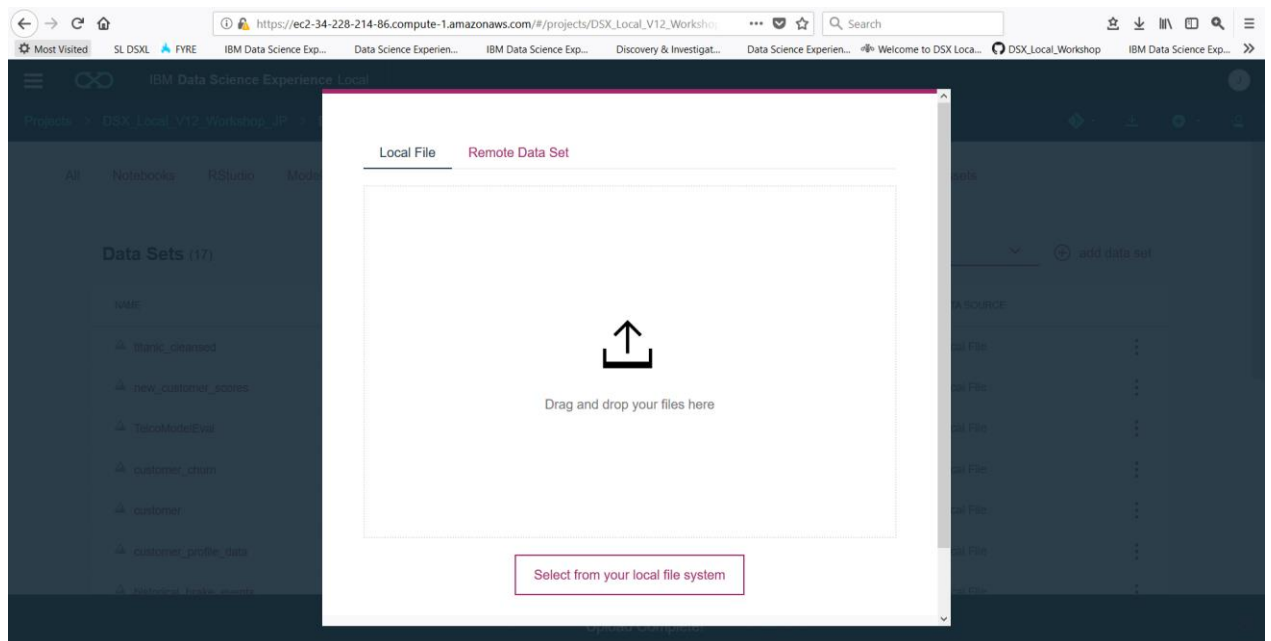

The screenshot shows a GitHub repository page for 'jpatter / DSX\_Local\_Workshop\_V12'. The file 'titanic\_cleansed.csv' is selected, showing its commit history and a preview of the data. The 'Raw' button is highlighted, indicating the next step in the process.

	pclass	survived	name	sex	sibsp	parch	ticket	fare	embarked
1	1	1	Allen, Miss. Elisabeth Walton	female	0	0	24160	211.337500	S
3	1	1	Allison, Master. Hudson Trevor	male	1	2	113781	151.550000	S

3. Save the file in your local filesystem
4. In your DSXL project go to **Data Sets** and select **add data set**

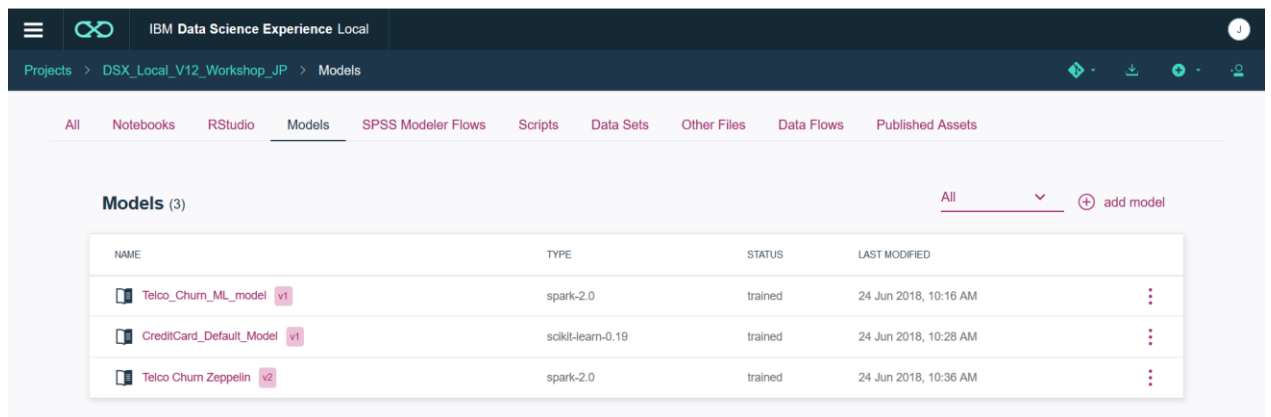

## 5. Browse or drag the **titanic\_cleansed.csv** file

## Step 2: Create a Model to predict survival

### 1. Select the **Models** tab

## 2. Select add model

The screenshot shows the 'Add Model' form in the IBM Data Science Experience Local interface. The form is titled 'Add Model' and includes the following sections:

- Blank / From File:** Two tabs at the top, with 'From File' selected.
- Name \*:** A text input field with a placeholder 'Model name' and a character count of 100.
- Description:** A text area with a placeholder 'Model description' and a character count of 300.
- Select model type \*:** Two radio buttons: 'Machine Learning' (selected) and 'Decision Optimization'.
- Method \*:** Two buttons: 'Automatic' (selected) and 'Manual'. The 'Automatic' button has the text 'Prepare my data and create a model automatically.' and the 'Manual' button has the text 'Let me prepare my data and select which models to train.'
- Buttons:** 'Cancel' and 'Create' buttons at the bottom right.

## 3. Enter a model **Name** (eg Titanic), optionally a **Description**, select **model type** of **Machine Learning** and select **Method** of **Manual**. Click on **Create**.

Projects > DSX\_Local\_V12\_Workshop\_JP > Add Model

Blank From File

### Select a technique

Column value to predict (Label Col)

survived

Suggested technique.

**Binary Classification**

Classify new data into defined categories based on existing data. Choose if your label column contains two distinct categories.

**Multiclass Classification**

Classify new data into defined categories based on existing data. Choose if your label column contains a discrete number of categories.

**Regression**

Predict values from a continuous set of values. Choose if your label column contains a large number of values.

7. Select **Add Estimators**. Select all estimators and select **Add**.

## Select estimator(s)

What type of estimator are you looking for?

### Logistic Regression

Analyzes a data set in which there are one or more independent variables that determine one of two outcomes. Only binary I...

### Decision Tree Classifier

Maps observations about an item (represented in the branches) to conclusions about the item's target value (represented in...

### Random Forest Classifier

Constructs multiple decision trees to produce the label that is a mode of each decision tree. It supports both binary and ...

### Gradient Boosted Tree Classifier

Produces a classification prediction model in the form of an ensemble of decision trees. It only supports binary labels, a...
